Bùi Tùng Dương (Yang)

Python Software Engineer

(+84) 345 450 185 tdbui1209@gmail.com https://github.com/tdbui1209 Haiphong, Vietnam

SUMMARY

- Python Software Engineer with **2+ years** of experience developing and maintaining test systems for camera-module manufacturing lines, including integration with customer-defined algorithms at result deviation **below 10^{-9}**.
- Skilled at processing large-scale production data and building test automation, with hands-on experience deploying AI and computer-vision systems on edge devices.
- Currently expanding into software test automation, aiming to grow into an **SDET** role that combines strong Python foundations with modern test design and automation practices for AI-driven products.

SKILLS

Programming	Python, Matlab
English	TOEIC Speaking 140
Tools & Systems	Git, PowerShell, Bash
AI / Computer Vision	TensorFlow, PyTorch, OpenCV
Others	Data analysis, Image processing, Failure Analysis & Corrective Action (FACA)

WORK EXPERIENCE

LG Innotek Vietnam Haiphong 06/2024 - Present

Test Software Engineer

- Contributed to the development of test systems for main, ultra-wide, and telephoto camera modules used in flagship smartphones from a leading global consumer-electronics brand.
- Developed and maintained test systems for manufacturing lines, ensuring high system stability and data integrity.
- Integrated test systems with customer-defined algorithms, achieving result deviation **below 10^{-9}**.
- Built image-processing-based failure analysis tools, reducing initial FA report generation time by **80%**.
- Collaborated with production and customers to implement an automated data validation system, eliminating manual format errors and achieving **zero data rejections**, while ensuring real-time data delivery.

Universal Scientific Industrial Vietnam 01/2024 - 06/2024

SFIS Engineer

- Supported SFIS (Shop Floor Information System) operations and data synchronization across production systems.
- Developed internal tools to improve data flow, automation, and overall system efficiency.
- Worked with manufacturing IT systems, gaining hands-on experience in production workflows and integration.

VNNet Haiphong 06/2023 - 12/2023

Software Engineer

- Developed a fire & smoke detection system using YOLOv5, deployed on edge devices (Jetson Nano) for real-time inference.
- Built an automated face recognition attendance system using AI camera with built-in APIs.

AWARD

2026 LG Innotek Improvement Excellence Award 03/2026

- Developed a system enabling direct interface with UAVI inspection equipment, accelerating the cosmetic inspection process and reducing the risk of defective units escaping detection, saving approximately **50 million KRW per month**.

EDUCATION

Vietnam Maritime University 10/2020 - 04/2024

Information Technology

GPA: **3.61/4.0**
